If the AIISH Principal Investigator ceases to supervise the Research for any reason, the co-investigator (CO-PI) will qualify to carry forward the research. In case the CO-PI is not named, during the awarding of the project, the PI will notify AIISH and the collaborating institute(s) promptly and may endeavour to find a substitute acceptable to the collaborating institute(s). If the PI at AIISH declines or is unable to find a substitute acceptable to the collaborating institute(s) within sixty (60) days after the AIISH Principal Investigator ceases to supervise the Research, the collaborating institute(s) may terminate this Agreement immediately upon written notice to AIISH.

- d) to arrange for short-term research visits based on invitation for utilization of major research facilities in each other's institutes; and
- e) Other co-operative activities mutually agreed upon on a case-to-case basis.

1.6. Expected outcome (*Project related*)

The literature has shown a likelihood of saccular pathology, as evidenced by reduced or absent cVEMPs, following cochlear implantation. However, it might be possible that the cVEMPs are reduced due to middle ear changes rather than the saccular changes, as middle ear manipulations are integral components of CI surgeries. If the results of the present study show that there is indeed a saccular damage, this will highlight the need for a vestibular rehabilitation program to be inculcated in their rehabilitation regime along with the auditory verbal learning. Alternatively, if the results favour the theory of middle ear damage behind the degraded VEMPs, it will disprove the popular belief that saccular damage is associated with cochlear implantation, thereby further certifying the safety of the device which is being observed as one of the biggest boons to the population with hearing impairment.
